

SAFETY

HAZARDOUS MATERIALS

Holst strives to provide a work environment free of hazardous material and harmful chemicals. In the case where such materials are required, Holst will provide appropriate safety equipment to its employees or contract the work out to organizations with the training and equipment to complete the work safely. Should you need to use hazardous materials, follow all guidelines for personal protection, ventilation, and disposal. If you have any questions or require training before handling hazardous materials, please talk to administrative staff prior to initiating work.

Holst looks to limit the use of hazardous materials and chemicals in all our designs. With cost, efficiency & longevity in mind, we specify the non-toxic alternative wherever possible.

Holst complies with all aspects of OSHA and WHMIS requirements regarding hazardous materials in the workplace.
